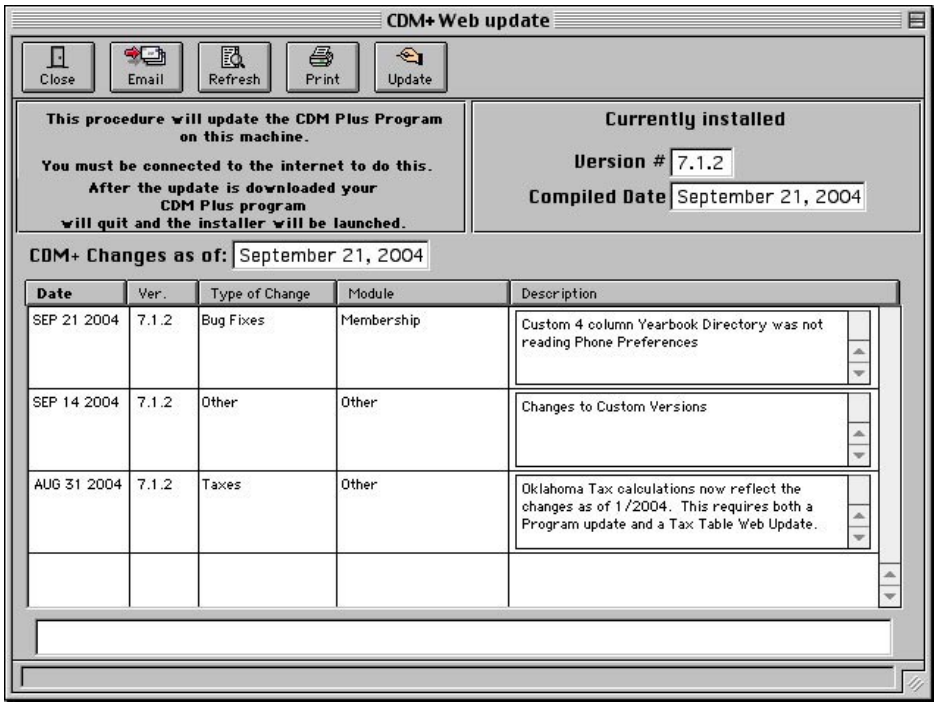
CDM Plus Web Update

Using the **Web Update** function, found on the **File** menu, ensures that you always have the most recent version of CDM Plus. It will download the update and install it in your CDM Plus folder. The **Web Update** will also download to your computer a listing of any changes made to the program. This list of changes can be viewed and printed at any time from the **Web Update** function. **Note:** a live Internet connection is required to use the Web Update feature.

To Update CDM Plus from the Web

1- Select **Web Update** from the **CDM+** menu.



2- Click on the **Refresh** button to see a listing of any changes to CDM Plus. This option will also check to see if there is a more recent version on the Web than you are currently running. You may sort the listing of changes by **Date**, **Version**, **Type of Change**, **Module**, or **Description** by clicking on the appropriate tab at the top of the listing.

3- Click on the **Update** button . If you already have the most recent update to CDM Plus, you will be asked if you still want to continue with the update.

4- After the update is downloaded you will be asked if you want to quit CDM Plus and install the update. If you say **No**, you can later manually launch the installer (**cdm712w.exe** for Windows and **CDM+ 7.1.2 Update** for Macintosh) that was saved in your CDM Plus folder. Otherwise, click **Yes** and follow the installation instructions as prompted.

5- When installation is complete, open CDM Plus to verify that the update is successful by checking the **Compiled Date:** against the **CDM+ Changes as of:** date. They should be the same.

6- If you are on a network, be certain that all users of CDM Plus are updated to the same version. You can simply copy the new **cdmplus.lbr** and **reg.lbr** files across the network to the other computers.

7- You can print a copy of the list of changes at any time by clicking on the **Print** button
